

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.19042.1706]
(c) Microsoft Corporation. All rights reserved.

C:\Users\LENOVO>docker

Usage: docker [OPTIONS] COMMAND

A self-sufficient runtime for containers

Options:
  --config string      Location of client config files (default
                        "C:\Users\LENOVO\.docker")
  -c, --context string  Name of the context to use to connect to the
                        daemon (overrides DOCKER_HOST env var and
                        default context set with "docker context use")
  -D, --debug           Enable debug mode
  -H, --host list       Daemon socket(s) to connect to
  -l, --log-level string Set the logging level
                        ("debug"|"info"|"warn"|"error"|"fatal")
                        (default "info")
  --tls                Use TLS; implied by --tlsverify
  --tlscacert string    Trust certs signed only by this CA (default
                        "C:\Users\LENOVO\.docker\ca.pem")
  --tlscert string      Path to TLS certificate file (default
                        "C:\Users\LENOVO\.docker\cert.pem")
  --tlskey string       Path to TLS key file (default
                        "C:\Users\LENOVO\.docker\key.pem")
  --tlsverify           Use TLS and verify the remote
  -v, --version         Print version information and quit

Management Commands:
  builder      Manage builds
  buildx*      Docker Buildx (Docker Inc., v0.9.1)
  compose*     Docker Compose (Docker Inc., v2.12.2)
  config       Manage Docker configs
  container     Manage containers
  context       Manage contexts
  dev*         Docker Dev Environments (Docker Inc., v0.0.3)
  extension*   Manages Docker extensions (Docker Inc., v0.2.13)
  image        Manage images
  manifest     Manage Docker image manifests and manifest lists
  network      Manage networks
  node         Manage Swarm nodes
  plugin       Manage plugins

```
Administrator: Command Prompt

sbom*      View the packaged-based Software Bill Of Materials (SBOM) for an image (Anchore Inc., 0.6.0)
scan*      Docker Scan (Docker Inc., v0.21.0)
secret     Manage Docker secrets
service    Manage services
stack      Manage Docker stacks
swarm      Manage Swarm
system     Manage Docker
trust      Manage trust on Docker images
volume     Manage volumes

Commands:
  attach    Attach local standard input, output, and error streams to a running container
  build     Build an image from a Dockerfile
  commit    Create a new image from a container's changes
  cp        Copy files/folders between a container and the local filesystem
  create    Create a new container
  diff      Inspect changes to files or directories on a container's filesystem
  events    Get real time events from the server
  exec      Run a command in a running container
  export    Export a container's filesystem as a tar archive
  history   Show the history of an image
  images    List images
  import    Import the contents from a tarball to create a filesystem image
  info      Display system-wide information
  inspect   Return low-level information on Docker objects
  kill      Kill one or more running containers
  load      Load an image from a tar archive or STDIN
  login     Log in to a Docker registry
  logout    Log out from a Docker registry
  logs      Fetch the logs of a container
  pause     Pause all processes within one or more containers
  port      List port mappings or a specific mapping for the container
  ps        List containers
  pull      Pull an image or a repository from a registry
  push      Push an image or a repository to a registry
  rename    Rename a container
  restart   Restart one or more containers
  rm        Remove one or more containers
  rmi       Remove one or more images
  run       Run a command in a new container
  save      Save one or more images to a tar archive (streamed to STDOUT by default)
  search    Search the Docker Hub for images
  start     Start one or more stopped containers
  stats     Display a live stream of container(s) resource usage statistics

```

```
Administrator: Command Prompt

stop      Stop one or more running containers
tag       Create a tag TARGET_IMAGE that refers to SOURCE_IMAGE
top       Display the running processes of a container
unpause   Unpause all processes within one or more containers
update    Update configuration of one or more containers
version   Show the Docker version information
wait      Block until one or more containers stop, then print their exit codes

Run 'docker COMMAND --help' for more information on a command.

To get more help with docker, check out our guides at https://docs.docker.com/go/guides/

C:\Users\LENOVO>
```

```
Run 'docker COMMAND --help' for more information on a command.
